Temperature

Programme selection

Instructions

Display screen for remaining time and programmes selected

Laundry door

Types of laundry machines:

10kg

18kg

User Needs

Interview Questions-Answers

How often do you use public laundries?

About once a week/10 days

3-4 times a year

How many programmes do you usually use?

I use the quick program and low temperature to wash sensitive clothes

I choose the program for color clothes and medium temperature

I prefer fewer and simpler programs, I don't use more than 3 or 4

Interview Questions-Answers

How easy do you think
a public washing
machine is to use?

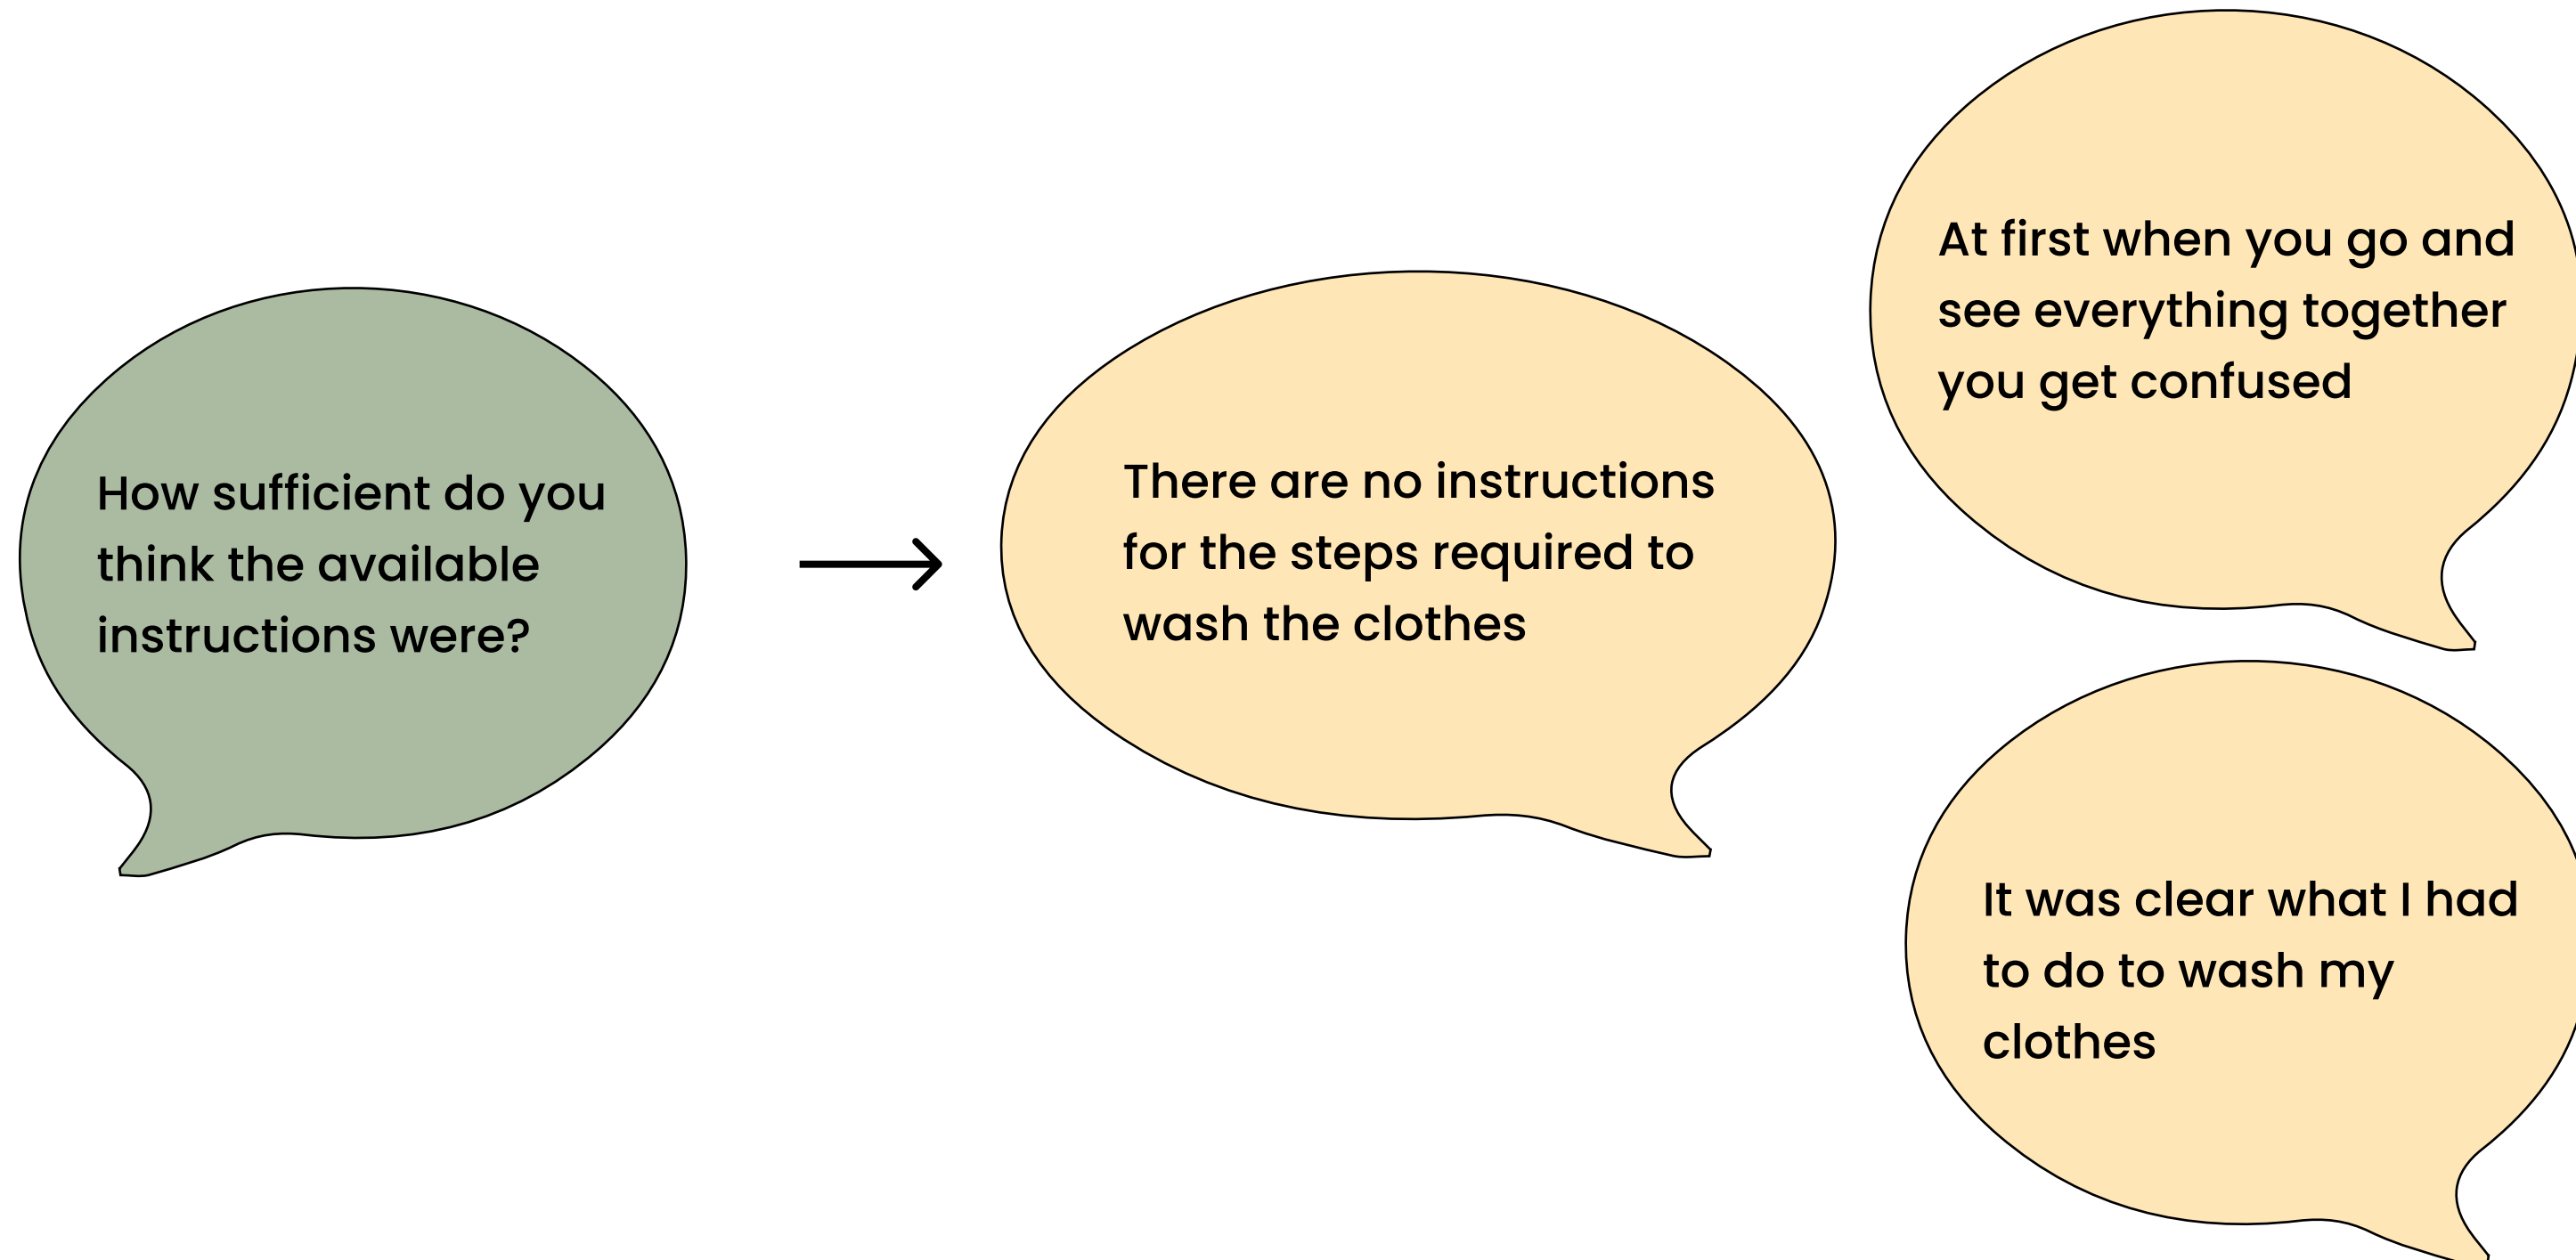

I had difficulty in finding
places for coins, card,
detergent

The first few times I had
some trouble using the
machine but then I got
used to the steps
required

Pretty easy to use once
you get the hang of it just
maybe the first time you
get confused if there
aren't proper instructions

Interview Questions-Answers

Interview Questions-Answers

Is there any missing feature that you would like to have ?

When travelling, I would want the menu to be available in English as well

Was there any occurrence where you faced any difficulties?

I always want to know how much time is left to finish washing

1st Scenario

A mother of three children, after the winter season, goes to a public laundromat to wash the curtains and blankets of the house. She sets the program to 40 degrees and pays with cash. She stays in the shop until the washing is finished.

2nd Scenario

A student wants to wash his weekly color clothes and goes to a public laundromat to wash them. He wants to get notified when the wash is finished because he wants to leave and come back. He also wants to pay with credit card, because he does not carry any cash.

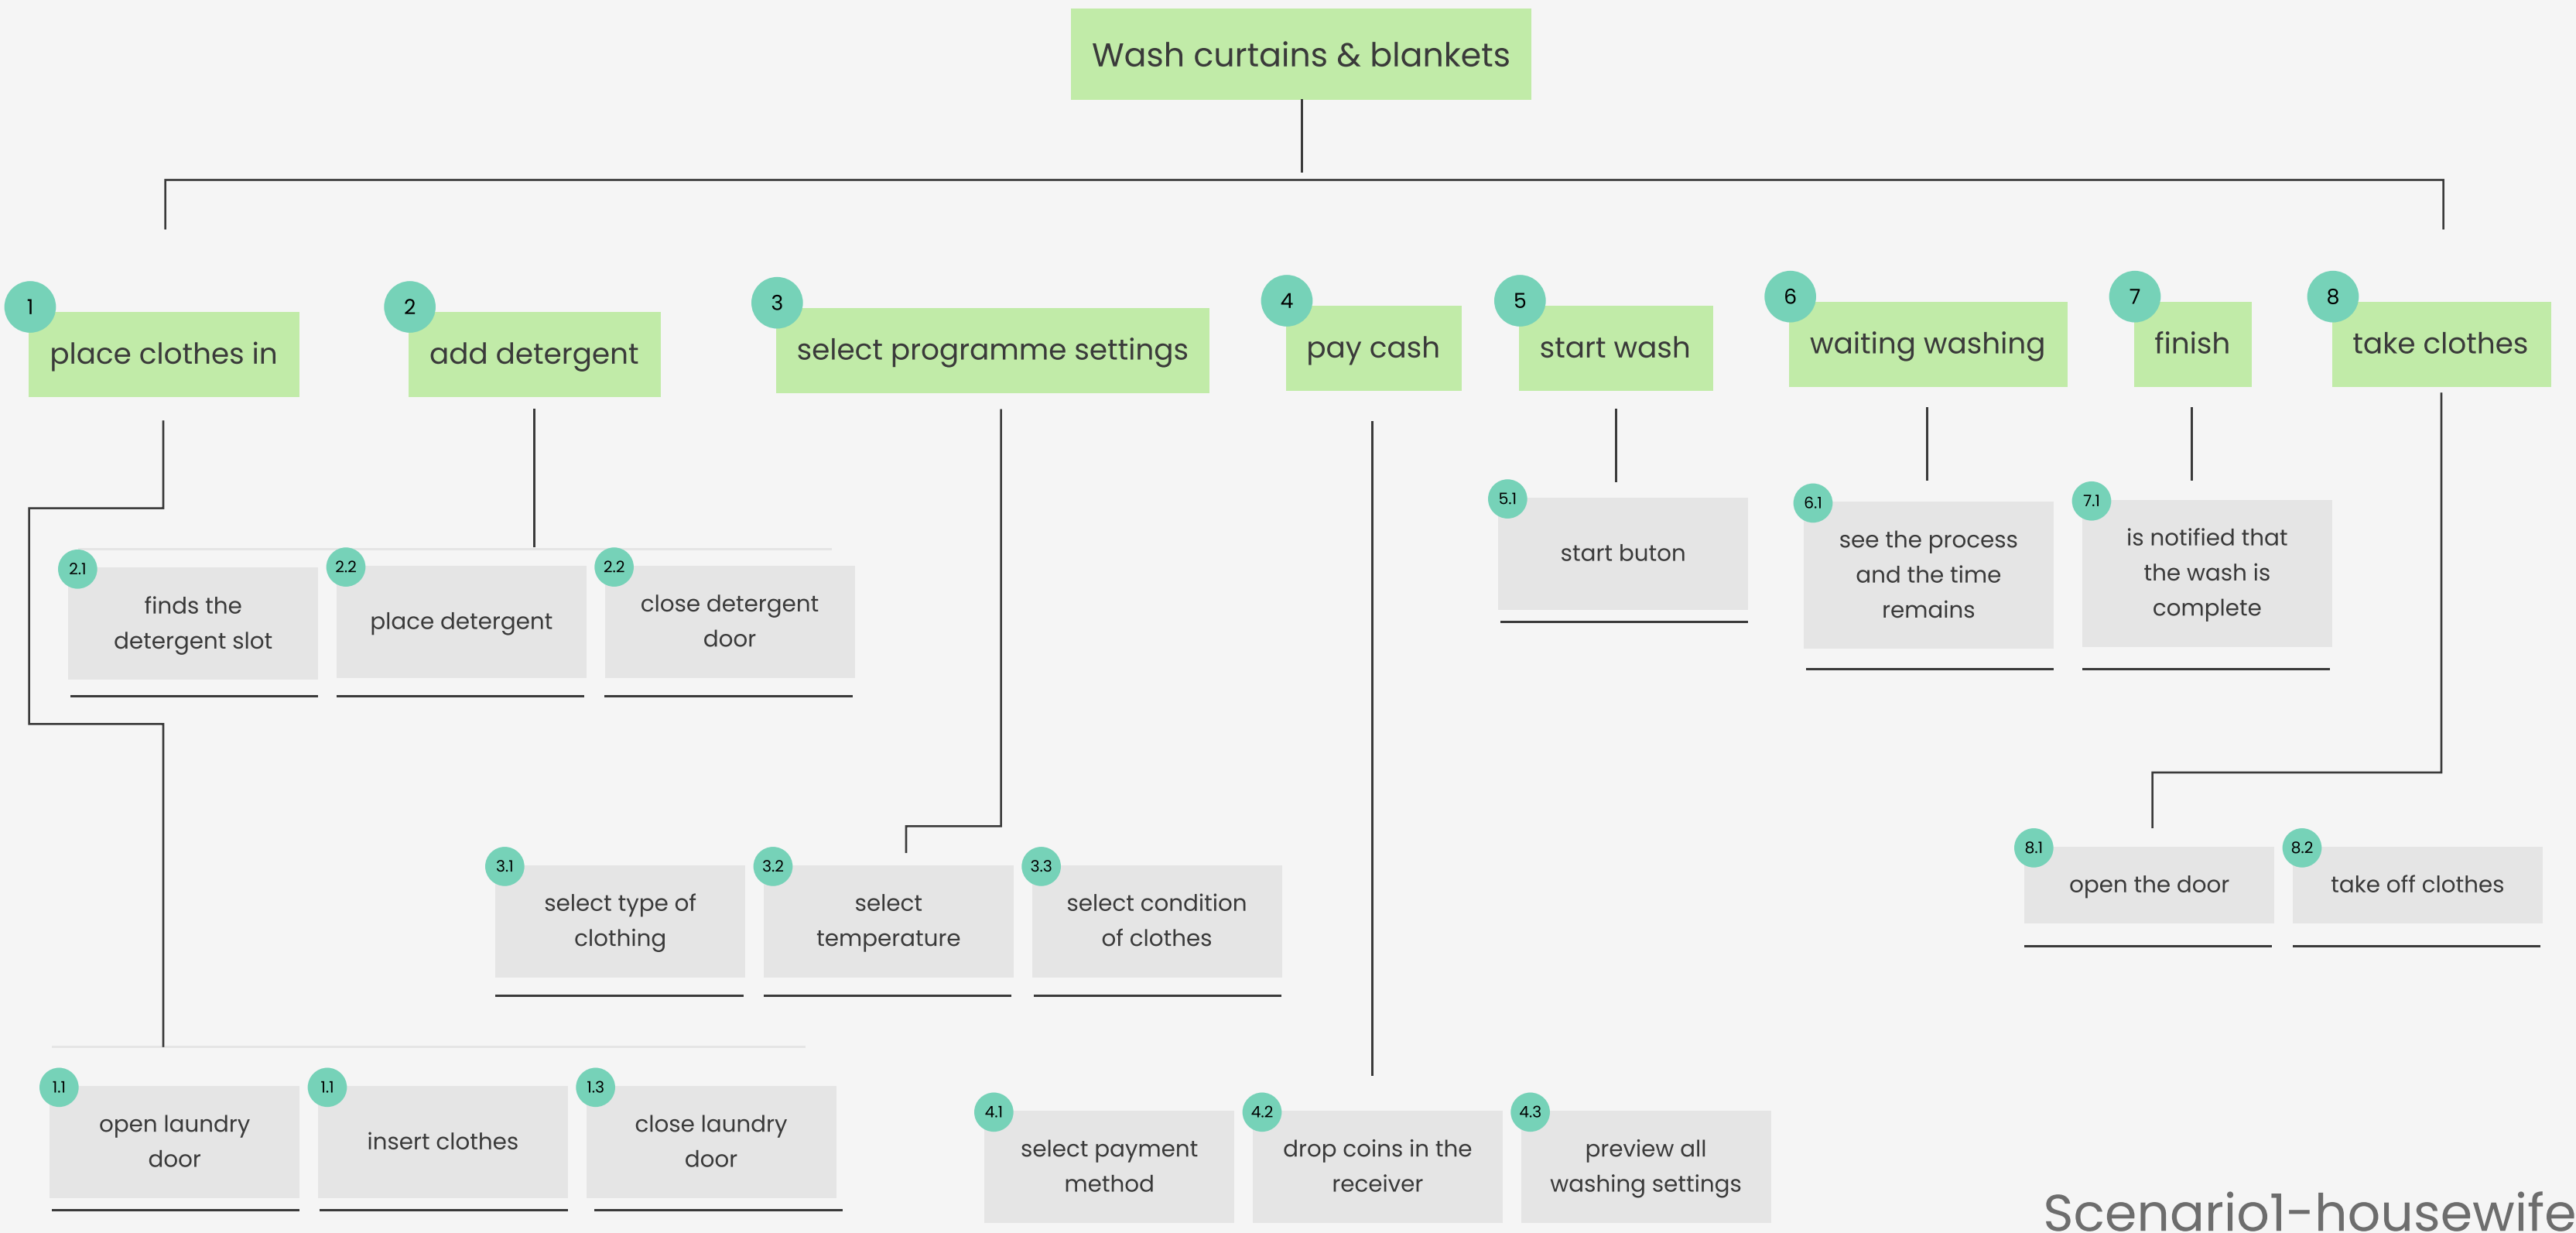

Design Requirements

Requirements

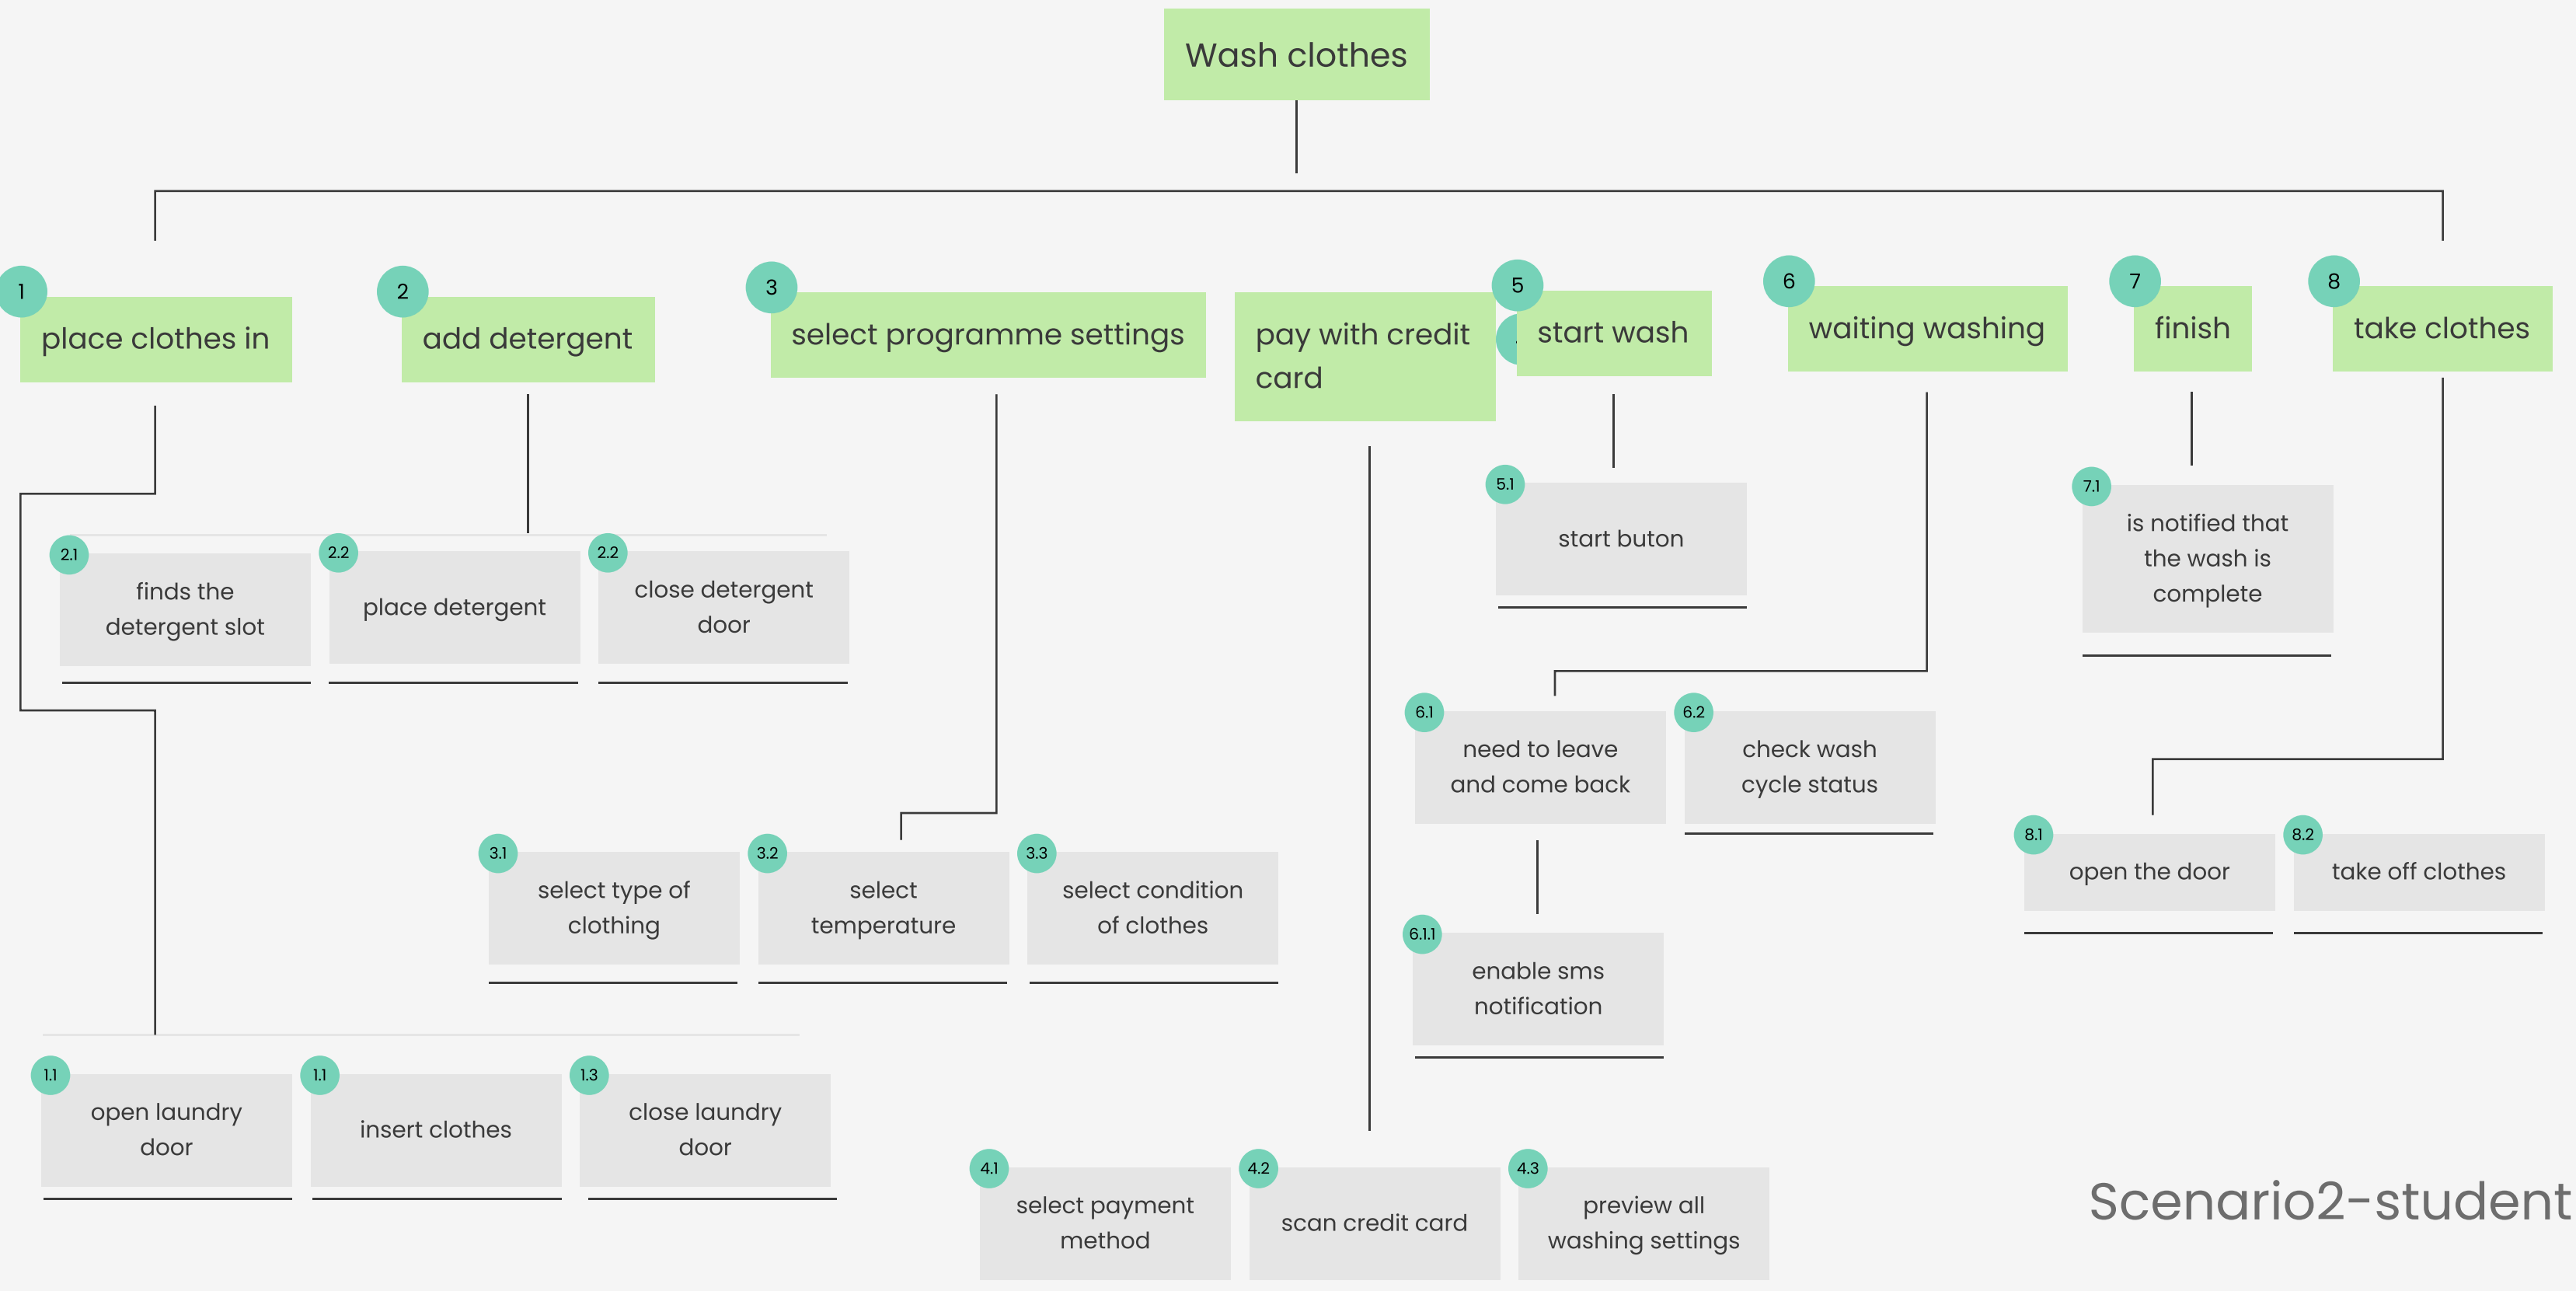

1. Few and understandable programmes
2. Two payment methods(cash & credit card)
3. Custom settings available
4. Countdown timer until washing process ends
5. Stages of washing process indicators
6. Accepted currency labeling
7. Icons labels acting as action signifiers
8. Preview of chosen settings

Hierarchical Task Analysis

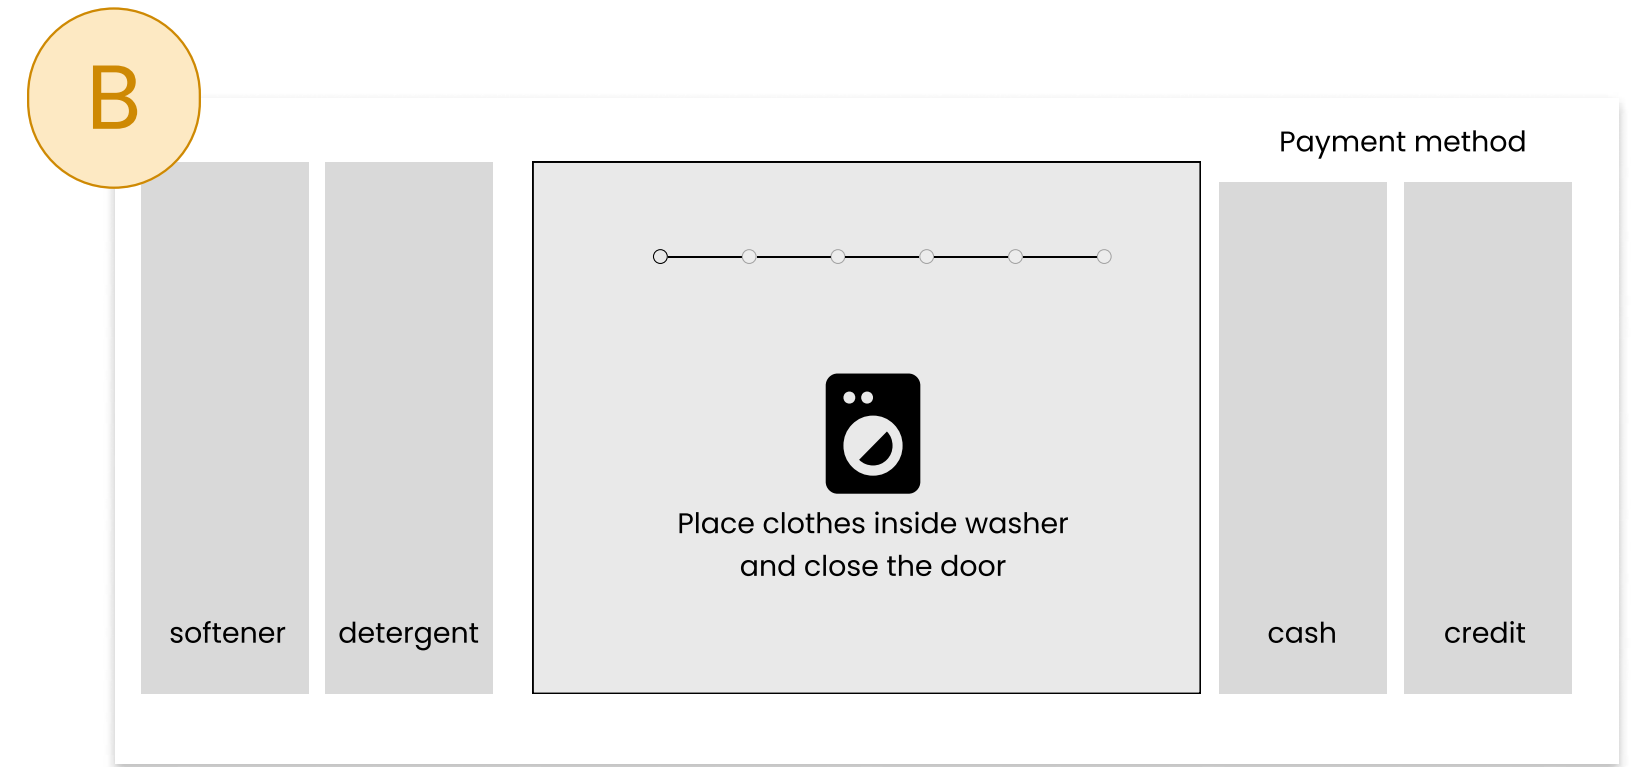

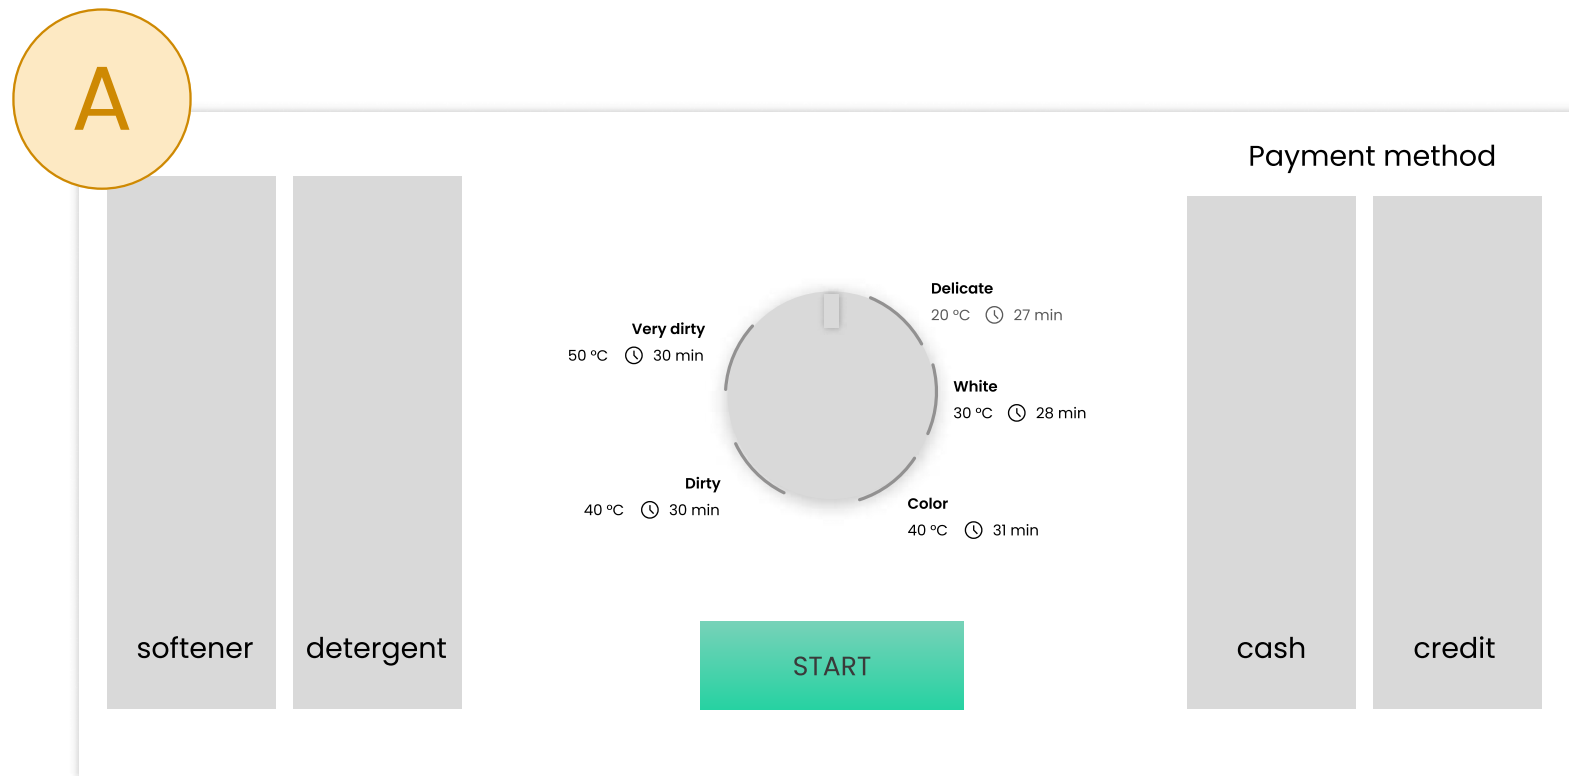

Scenario1-housewife

Scenario2-student

A/B

Alternative Conceptual Design

These are two interface choice mockups

A (left): An analog rotating dial, where the user can choose the desired program with the corresponding time and temperature

B (right): A digital touch screen interface, closer to what we are used to using in our everyday lives (smartphones, etc.) where all the information and steps takes are displayed

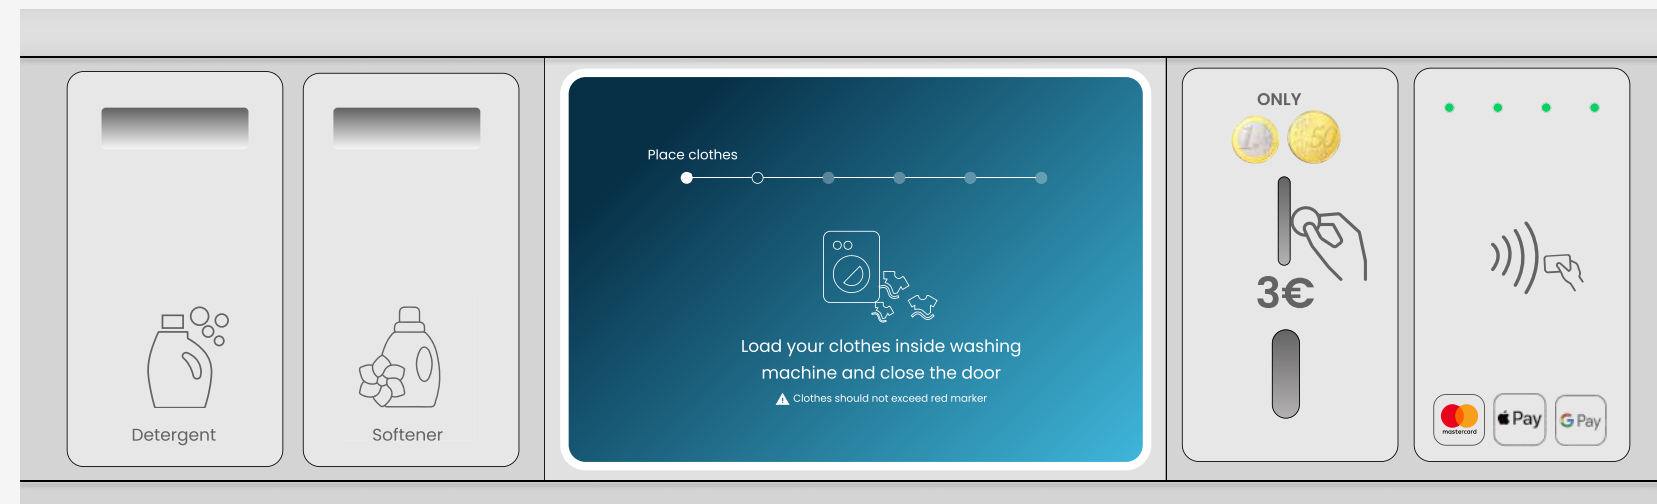

We chose to go with B as we believe it is a more clear and comprehensive way to communicate messages and directions to the users

Detailed Design of Interface

Laundry Process:

1. Load the laundry
2. Add detergent and softener in respective containers
3. Select the right washing programme depending on the clothes
4. Select payment method: cash/credit card
5. Press Start button
6. Wait until programme finishes
7. Take clothes

detergent

softener

Main screen

coins slot

credit card

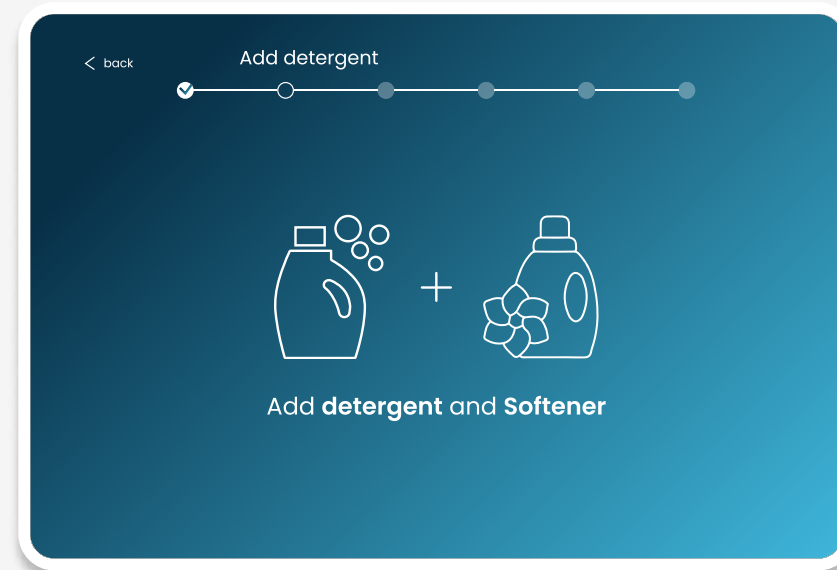

STOP button

red marker

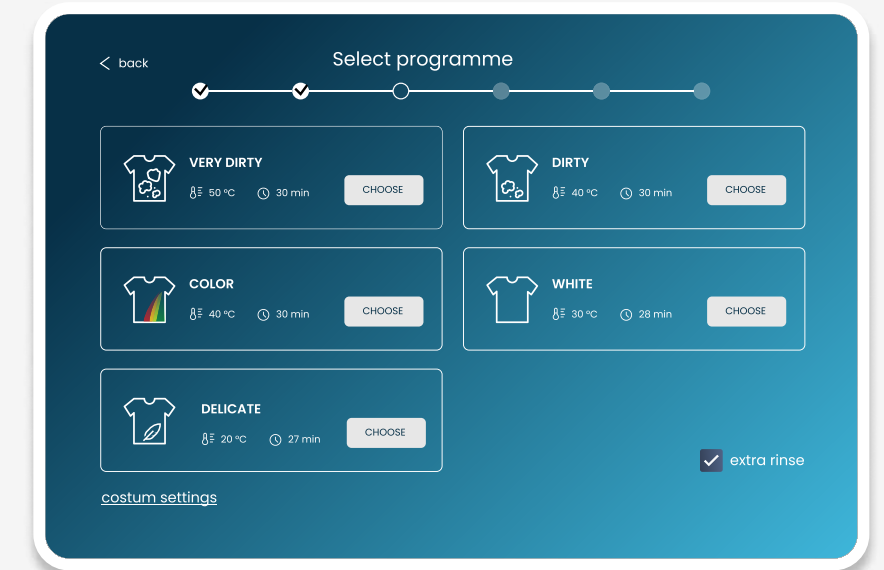

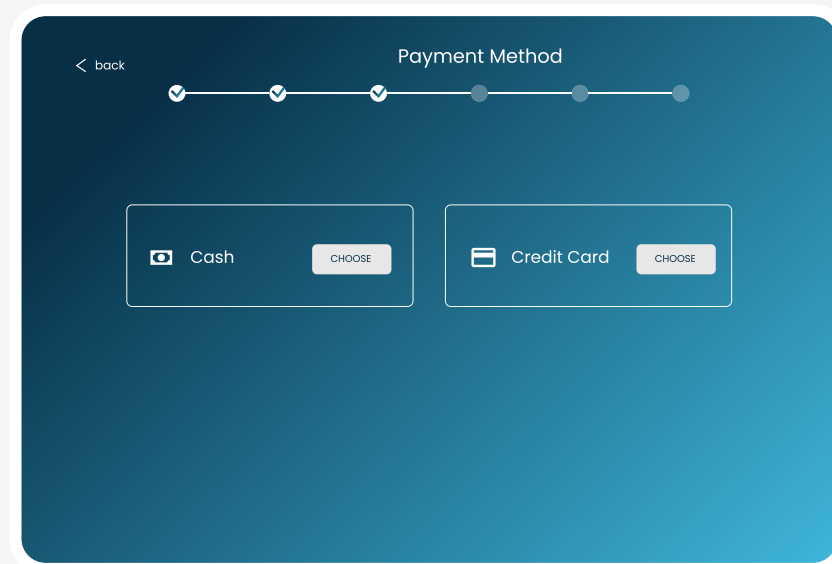

Welcome screen prompting the user to load their clothes into the washing machine

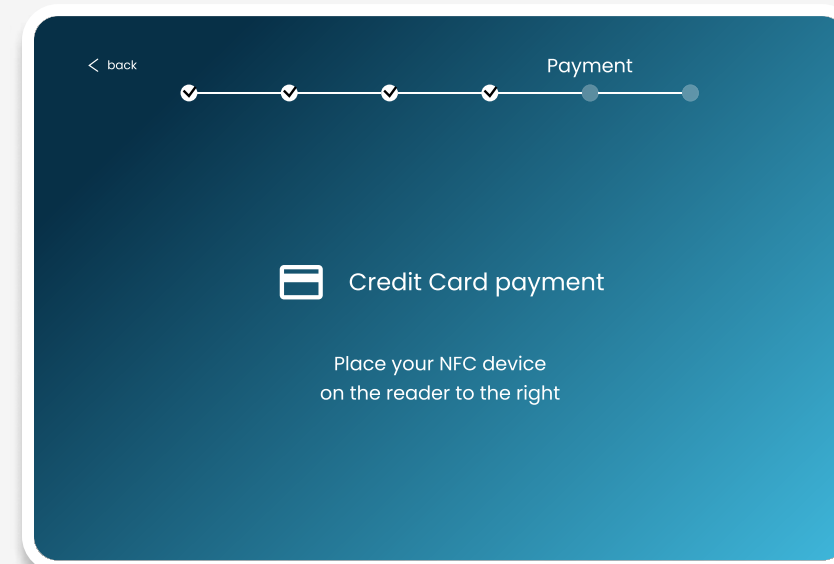

Second screen, instructing the user to add clothes softener and detergent

Third screen showing the available wash programs the user can choose from, along with information about the temperature and time set for each one

Fourth screen asking what the desired payment method is

Fifth screen prompting the user to pay contactlessly by touching their card/phone on the NFC reader

Sixth screen showing a preview of the selected wash program, start button and an option to be alerted when the wash is finished

Seventh screen showing current wash status (System Visibility)

[Prototype link](#)

New Features

Programmes

Programmes are very clear now for the users and are the following:

- **Very dirty** 50 °C ⌚ 30 min
- **Dirty** 40 °C ⌚ 30 min
- **Color** 40 °C ⌚ 35 min
- **White** 30 °C ⌚ 28 min
- **Delicate** 20 °C ⌚ 28 min

Sms notification

The machine has the ability to text the user via SMS to notify him when the washing is finished

Feedback signifiers

There is an LED indicator around the detergent, softener slots and NFC tag that signify where the user should focus

The washer makes a beep sound every time the user presses a button on the touch screen

Trade-offs & Dilemmas

Trade-offs & Dilemmas

- Trade-off between modernizing the washing machine (with a touch screen) and using the standard dial – some older people might experience some difficulties in using it
- Dilemma regarding how many & what programs should be available, we had to ask users and discuss

- Trade-off between too much and too little information displayed on screen – Info displayed should be just enough to inform the user but not confuse or overload (low cognitive load)
- Dilemma as to where we should put the “Stop” button on the washing machine

THANK YOU..!
